

MobiRoof ECO Sedum & Wildflower helps preserve native species

The concept of green roofs has gained increasing popularity in recent years. Besides contributing to improved insulation and aesthetic value, green roofs have important biodiversity benefits to offer.

MobiRoof ECO Sedum & Wildflower uses native wildflowers and herbs on the roof. This variety of home-grown species contributes even more to climate adaptation.

Sustainability and environmental friendliness

MobiRoof ECO Sedum & Wildflower contributes to a healthier and resilient environment, as well as supporting local ecosystems.

Because native plants thrive naturally in our environment, they are stronger and do not need artificial pesticides and chemicals. This helps reduce the chemical load on soil and groundwater. Moreover, wildflowers on a green roof do not require exhaustive cultivation methods, such as intensive fertilisation or irrigation, contributing to a more balanced and natural environment.

Sedum & Wildflower helps biodiversity

Using MobiRoof ECO Sedum & Wildflower on the roof promotes biodiversity by providing a habitat for various plant and animal species. Creating a green roof with wildflowers, herbs and sedum helps preserve native flora and fauna, and helps protect endangered species. The mix also adds colour, texture and diversity to a garden or business park, making it more attractive and vibrant. Space users enjoy a natural-looking environment that is in harmony with nature.

Sedum & Wildflower grows in fully recyclable cassettes

MobiRoof ECO Sedum & Wildflower consists of a unique lightweight cassette system equipped with substrate. This special substrate ensures drainage and storage of water, and has the function of a growth medium. The cassette is planted with various types of sedum plants and 21 native wildflowers and herbs, such as yarrow, chives, cushion calamint, Deptford pink, sheep's fescue and more. The cassettes are easily 'clicked' together and are also movable. They can even be cut in half, allowing the sedum roof to be completely customised. MobiRoof ECO cassette is made of recycled material and is fully recyclable.

UNIQUE FEATURES

Ready-to-use cassette with substrate and sedum plants

Ready for use as roof cover

Lightweight green roof system

Easy to install and replace

Water retention of 20 litres per m² (optional 30 litre per m²)

Sustainably and locally produced

Circular, recycled and fully recyclable

Low maintenance

Can be used on both flat and slightly sloping roofs

BENEFITS

Collection and buffering of rainwater

Stimulates biodiversity

Insulating and sound-absorbing effect

Extends the life of the roof

Aesthetic value

Increases the value of real estate

Increased efficiency of solar panels

Eligible for subsidies and tax breaks
